TITLE The Invention No 143 - 41,113

PERIODICAL Știință și Tehnică, 1960 No. 6, pp. 10 - 11

TEXT Subject article appreciates the inventions of the Manager of the Intreprinderea "Monetăria statului" (Enterprise) in Bucharest, Ion Sumănu. During the last 10 years, Sumănu's inventions were of great economical importance: e.g., the replacement of tombac strips used for the manufacture of medals by tombac plated steel strips; the replacement of expensive alloyed steels used for the production of tools by carbon steel plated with alloyed steels; plating of steel strips with a layer of antifriction material, used for the production of journal bearings for trucks and tractors. These three plating procedures of Sumănu are very simple and not expensive. The fourth invention is only mentioned as "Invention No 143/41,113" but not described in the article. All these inventions have been accomplished in cooperation with Nicolae Turbanu, Gheorghe Barbu, Stan Zaharia, Ion Bodea, Dumitru Dicoiu, Alexandru Liviu, Petre Marco, and others. There are 5 figures.

Dzhunkovskiy Ye. and Lus I., in the Discovery and Description of
Tayleriosis in Cattle.

Orig Pub: Tr. Dagest. s.-kh. in-ta, 1955, 6, 3-5.

Abstract: The cause of tayleriosis, Th. annulata was described for the
first time in 1903 by Russian scientists, and Tayler, in 1904,
described another species, Th. parva; therefore in the opinion
of the author, the name of the disease, tayloriosis should
be considered as false.

Title : Enzootic Ataxia in Lambs in Dagestan

Orig Pub : Tr. Dagestansk. in-ta, 1956, 8, 4853

Abstract : Enzootic ataxia in lambs with manifestations of disturbance of the nervous system, uncoordinated movements, and spasms of brief duration were noted in lambs during the winter-spring period. The lambs were either born sick or became sick during the first 30 days. Strained walking was the first symptom of the disease in such lambs. When moving forward the lambs fell and because of the weakness of their posterior extremities set down like dogs. Lambs that recovered remained in a crippled

"Mosaicism 16/17 with Trisomia 17-18."

Prague, Časopis Lekaru Ceskych, Vol 15, No 11, 4 Nov 66, pp 1205 - 1208

Abstract /Authors' English summary modified/: A case of a 5 day old girl with 16/17 mosaic and 17-18 trisomia is described. Apart from anomalies and signs observed in the past in cases of trisomia 17-18, the patient suffered also from stenosis of the esophagus and cardia, hiatus hernia, dilate of the gastric wall with an orifice of an accessory pancreatic tail, and pylorostenosis. The absence of some cardiac changes in the syndrome indicates a case of mosaic and latent trisomia 17-18. 4 Figures, 3 Tables, 16 Western references. (Manuscript rec. Mar 66).

Abs Jour : Ref Zhur-Biol., No 2, 1958, 32787.

Abstract : specific. A nonspecific effect is known to one which affects the processes which are the results of the modifications in the action of mediators caused by a given substance. l has shown that luminal has a specific and a nonspecific effect on the working organ, with the first predominant when large doses, and the second predominant when small doses are administered. The nonspecific action is exhibited in a weakened reaction of the organs to l, while the effect of ll and potassium ions does not change. The specific effect of large doses is indicated by a primary paralysis of the cells in which they are insensitive to l, ll, potassium ions, and even to barium chloride. Chloral, paraldehyde, and chloralose while nonspecific in action intensify the effect on l on the musculature. Their specific action causes contractions, which is succeeded by

The authors have established the feasibility of the quantitative determination of 1-phosphatidyl-2,3-dione (1) by the method of potentiometric titration (precipitation of the Ag salt of 1 with a solution of $AgNO_3$ and titration of the unreacted $AgNO_3$ with a solution of NH_4I using the Ag-saturated calomel electrode system); a potentiometric method for the determination of 1 in tablets has been developed.

963. High-frequency interference from fluorescent
lamps. J. DANK. *Služba Obr.* 11, 199-61 (Sept.,
1950) In Czech.

The h.f. oscillations produced by fluorescent lamps,
although relatively weak, may interfere with h.f.
apparatus, particularly with measurements in the h.f.
range in laboratories. Broadcast reception is
seldom affected. The author analyses the possible
ways of spreading the oscillations from lamps, the
field distribution along the lamps (which is very
irregular), and earthing. The protective means
enumerated are efficient and easy to apply. Neither
blocking circuits and filters nor screening arrange-
ments differ from those generally used for interference
suppression.

Obrázové zesilovače pro televizi a měřicí techniku (Video Amplifiers for Television and Measuring Technique) Praha, SNTL, 1957. 290 p. Errata slip inserted. 3,350 copies printed.

Reviewers: Jiří Havelka, Engineer, and Bohumil Kvasil, Engineer, Docent;
Resp. Ed.: Rudolf Major; Tech. Ed.: Libuše Hokrová; Managing Ed. for Literature on Electrical Engineering: František Kašpar, Engineer, Doctor (Chief Ed.)

PURPOSE: This book is intended for research and development personnel working in the field of high-frequency communication engineering. It may also be useful to students of engineering schools.

COVERAGE: The authors discuss video amplifier circuits and present their performance characteristics. They describe high-frequency and low-frequency compensation and analyze tuned video amplifiers. They also derive basic amplifier relationships and discuss sensitivity of video amplifiers. The authors thank O. Mark,
